

## The vacuum pump

The food grade vacuum pump is based on a technology developed by ASEPT more than 30 years ago. It has become a standard and is approved by all brand owners.

**Safe:** Hygienic design, easy to clean in the dishwasher, NSF-approved

**Flexibility:** Design can be made to handle high viscous products and products with particulates.

**Food grade:** All materials are food grade, suitable for cleaning in the dishwasher.

## The bag and the fitment

The bags are of the Bag-in-box type and are designed to:

- Protect your product: Aseptic or Ultra clean
- Fit perfectly into the dispenser
- Fit inside the box

**Materials:** The bags are designed with a barrier to protect your product. They can be supplied pre-sterilized in single or web.

**Connection:** The bag has a special connector piercing cap on a standard spout. This will allow you to fill the bags on any BIB filler, aseptic or ultra-clean. The piercing cap provides a clean and hygienic connection to the pump in the dispenser.

**Protection:** The fitment is provided with a clean peelable first-user seal to protect your product.

### The original concept in brief

#### Food safety through air-free pouches

The product stays fresh and tasty, there is less need for preservatives and the product can be stored at ambient temperature.

#### The Asept fitment keeps the pouch air-free

Hygienic handling with a perfect fit between pump and fitment. Cost-effective with extended secondary shelf life.

#### Easy dispensing with one complete system

Portion control, easy switching between different condiments and branded dispenser that promotes your brand.

#### Minimum waste with flexible pouches

Product yield almost 100%, easy to store and to fold up when emptied, decreasing your carbon footprint.
